## RF Constant Voltage LED Driver

## Model No.: PB-75-12, PB-75-24

## Features

- Dimming interface: RF Wireless, AC Push-Dim
- Match with RF 2.4G single color remote control, one RF LED driver accepts up to 10 remote controls
- 1 channel constant voltage output, Max. total output power 75 W
- Auto-transmitting function: LED driver automatically transmit signal to another LED driver with 30 m control distance
- Synchronize on multiple number of LED drivers
- Light on/off fade time 3s selectable
- Over-heat / Over-load / Short circuit protection, recover automatically
- Full protective plastic case
- Suitable for indoor LED lighting application
- 3 Year, 30,000hr warranty

## Applications

- Suitable for LED related fixture or appliance which use LED light bar and LED tape (like LED Decoration or Advertisement devices).
- Office / Commercial / Domestic Lighting, Hotels, Retail and Display.
- Use for retrofit upgrades \& new luminaire designs.

Mechanical Structures and Installations

Technical Parameters

## Wiring Diagram

## 1. RF Connection

## Match Remote Control (two match ways)

End user can choose the suitable match/delete ways. Two options are offered for selection:

## Use Match key

Match:
Short press match key, immediately press on/off key (single zone remote) or zone key (multiple zone remote) of the remote.

## Delete:

Press and hold match key for 5 s to delete all match, The light blinks 5 times means all matched remotes were deleted.

## Use Power Restart

Match:
Switch off the power, then switch on power, repeat again. Immediately short press on/off key (single zone remote) or zone key (multiple zone remote) 3 times on the remote. The light blinks 3 times means match is successful.

Delete:
Switch off the power, then switch on power, repeat again. Immediately short press on/ off key (single zone remote) or zone key (multiple zone remote) 5 times on the remote. The light blinks 5 times means all matched remotes were deleted.

## When use multiple RF drivers, two application method:

1. All the drivers in the same zone.

Auto-transmitting: One driver can transmit the signals from the remote to another driver within 30 m , as long as there is a driver within 30 m , the remote control distance can be extended.
Auto-synchronization: Multiple drivers within 30 m distance can work synchronously when they are controlled by the same remote.
Driver placement may offer up to 30 m communication distance. Metals and other metal materials will reduce the range.
Strong signal sources such as WiFi routers and microwave ovens will affect the range.
We recommend for indoor applications that driver placements should be no further apart than 15 m .
2. Each driver(one or more) in a different zone, like zone 1, 2, 3 or 4 .

## 2. AC Push-Dim connection

## Light on/off fade time

Long press match key 5s, then short press match key 3 times, the light on/off time will be set to 3 s , the indicator light blink 3 times.

Long press match key 10s, restore factory default parameter, the light on/off time also restore to 0.5 s .

The provided AC Push-Dim interface allows for a simple dimming method using commercially available non-latching (momentary) wall switchs.

- Short press:

Turn on or off light.

- Long press (1-6s):

Press and hold to step-less dimming, With every other long press, the light level goes to the opposite direction.

- Dimming memory:

Light returns to the previous dimming level when switched off and on again, even at power failure.

- Synchronization:

If more than one LED driver are connected to the same push switch, do a long press for more than 10 s ,
then the system is synchronized and all lights in the group dim up to $100 \%$.
This means there is no need for any additional synchrony wire in larger installations.
We recommend the number of LED drivers connected to a push switch does not exceed 25 pieces,
The maximum length of the wires from push to LED driver should be no more than 20 meters.

## Installation Precautions

1. The products shall not be stacked, the distance should be $\geq 20 \mathrm{~cm}$, so as not to affect lifespan of the products due to poor heat dissipation.
2. The installation height shall be $\geq 1 \mathrm{~m}$ from the floor to avoid shortening the remote control distance due to too weak reception signal.
3. The products are not allowed to be close to or covered by metal objects, with an interval of $\geq 20 \mathrm{~cm}$ to avoid signal attenuation and shorten the remote control distance.
4. Avoid installation at the corner of the wall or the corner of the beam, with an interval of $\geq 20 \mathrm{~cm}$ to avoid signal

Dimming Curve
 interference.
